

U PROTECT PIPE SECTION ALU2

TECHNICAL INFORMATION

Fireclass	A2L-s1,d0
Thickness	20-120 mm
Facing	Aluminium laminate
Highest temperature (°C)	620
Max. operating temperature for the facing	80 °C

Thermal conductivity

°C	40	50	100	150	200	300
W/mK	0.035	0.037	0.043	0.052	0.062	0.092

The product is an ULTIMATE pipe section coated with mesh-reinforced aluminum laminate and equipped with a tape closure, designed for the thermal and condensation insulation of building services and industrial pipes.

PRODUCT DESCRIPTION

ULTIMATE mineral wool pipe section with an aluminum laminate surface for the insulation of building services and industrial pipelines, suitable also for high operating temperatures.

USAGE

The product is used as thermal and condensation insulation for building services and industrial pipelines.

INSTALLATION

The longitudinal seams of the product are secured with the product's own tape closure. The transverse seams are fastened with aluminum tape. If the insulation is exposed to potential impacts, it can be covered with additional cladding.

PACKAGING

Cardboard packaging. Large sizes are individually packed.

STORAGE

When handling packages and products, the instructions provided on the packaging or in the manufacturer's separate user manual must be followed.
